

Cooking is the main cause of domestic fires and for the most part, the prime culprit is the unattended cooking oil on the stove. A scenario that upon insurance companies, just in Europe alone, occurs more than a thousand times a day. Such fires are also the main cause of injuries and deaths in households, not to mention material damage. It can happen to anyone.

Don't panic, we've a new, simple, effective, money-saving solution.

We present you the

Oil Fighter

Oil Fighter is a fire extinguishing sachet that is used to put out grease fires in a few seconds, in different types of cookware, without the possibility of reignition and emission of toxic substances. One single sachet puts out a fire of up to a litre of burning cooking oil, while two sachets put out a fire of up to two litres of burning oil.

Example of firefighting with powder or CO₂ fire extinguisher

Households usually have standard powder or CO₂ fire extinguishers that aren't suitable for putting out grease fires. Besides, they aren't easily accessible in apartment buildings and houses, and can additionally spread out the fire when not used properly.

ADVANTAGAES:

- It's easy to use, because the sachet is simply placed into the burning oil
- Its extremely fast activation puts out a grease fire in a few seconds
- It prevents auto reignition
- It's suitable for putting out all types of grease fires in different cookware
- Its compact design enables you to always keep it at hand
- It doesn't require maintenance and has a considerably longer expiry date than standard fire extinguishers
- It's suitable for using outdoors as it puts out a grease fire even in a strong wind
- It keeps you safe also on campsites and vessels

Example of firefighting with water

What happens when we try to put out a grease fire with water. An explosion erupts when water comes into contact with the burning oil.

In case of burning oil in a pot or a pan! One, two, three (in seconds)

Oil Fighter should be kept in every kitchen.
